

Figure PPS-B

Among those who have not received a COVID-19 vaccine, reasons for intending not to get a vaccine: January 2021 and September 2021

n = number of survey responses.

Note(s):

See Table SPSS-14 for standard errors. Survey population includes those 18 years old or older who reported not having received a COVID-19 vaccine and who responded that they probably or definitely did not intend to get a vaccine. Reasons offered differed slightly in the January and September questionnaires. Respondents could select multiple reasons. Reasons do not sum to 100%. January and September surveys reflect two different cross-sectional samples. Responses are to the following: *Which of the following, if any, are reasons that you [probably won't/definitely won't] [get a COVID-19 vaccine]? (Select all that apply).*
